

# Windows USB Setting Guide & FQA

## 1. How to setting USB printing on Windows?

(1) **Step1-** Start the printer and connect to the computer with USB cable.

(2) **Step2-** Download the Software from the website <https://gj.herelabel.top/> (Through this software you can directly download the driver and edit the label)

① **Before downloading-** Please ensure that the network is normal and **turn off the anti-virus software to avoid errors**. This is because there are many different types of antivirus software, and we can't guarantee that we have submitted our security reports to every antivirus software. Don't worry, our software and drivers don't carry any computer viruses.

② **Download & Install-** Click [here](#) to go to the software official website to download the **latest version** of the software

# Hanin Drive Management

- Install the driver with one click
- Diagnose print problems with one click
- Install Bluetooth printer driver with one click

Download

"Hanin Drive Management" PC client download  
<https://gj.herelabel.top>

Setup - Hanin Drive Management

## Completing the Hanin Drive Management Setup Wizard

Setup has finished installing Hanin Drive Management on your computer. The application may be launched by selecting the installed shortcuts.

Click Finish to exit Setup.

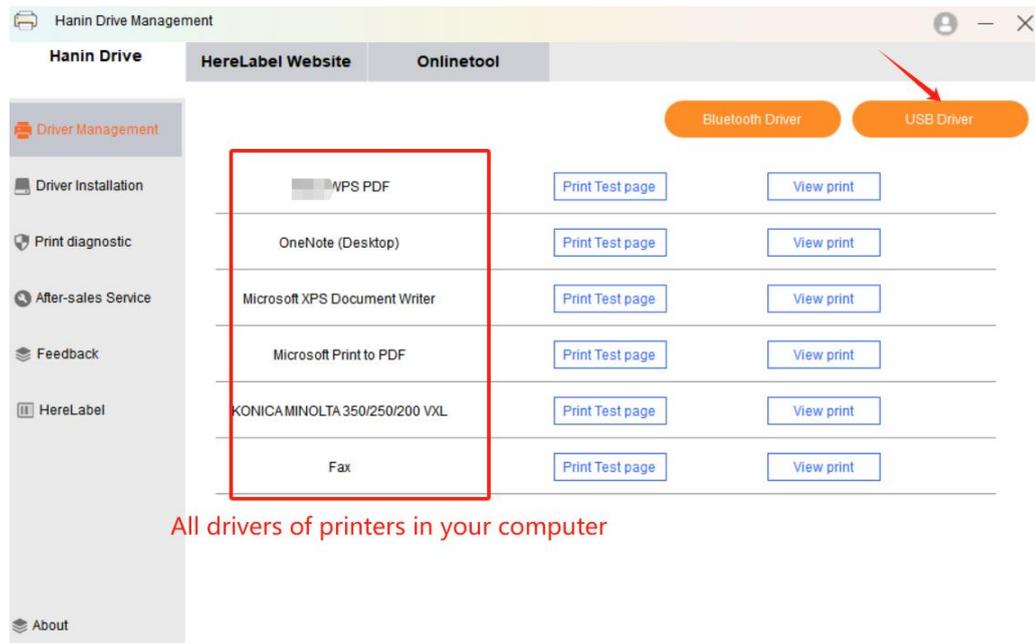

Launch Hanin Drive Management

Finish

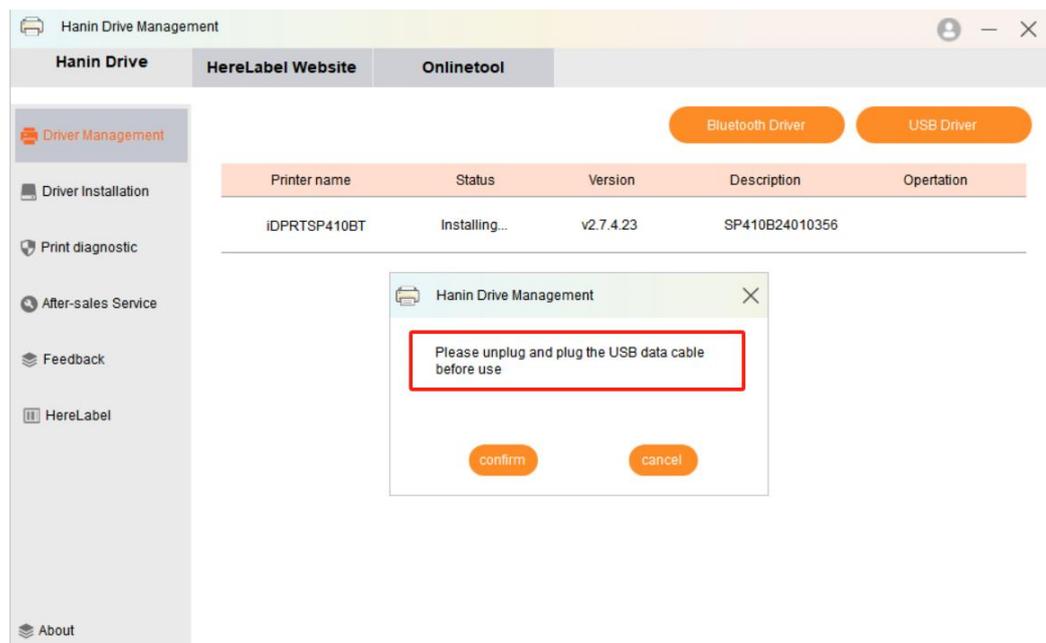

### (3) Step3- Setting on the software

If you want to **print via USB**, please click **“USB Driver”** to install the driver for USB Printing.

At the same time, in order to match the computer with the correct USB port, **please unplug and plug in the USB cable as prompted.**

All drivers of printers in your computer

After installing, please **click to print test page** (If you have set up both Bluetooth printing and USB printing, please select the right printing name before printing each time.)

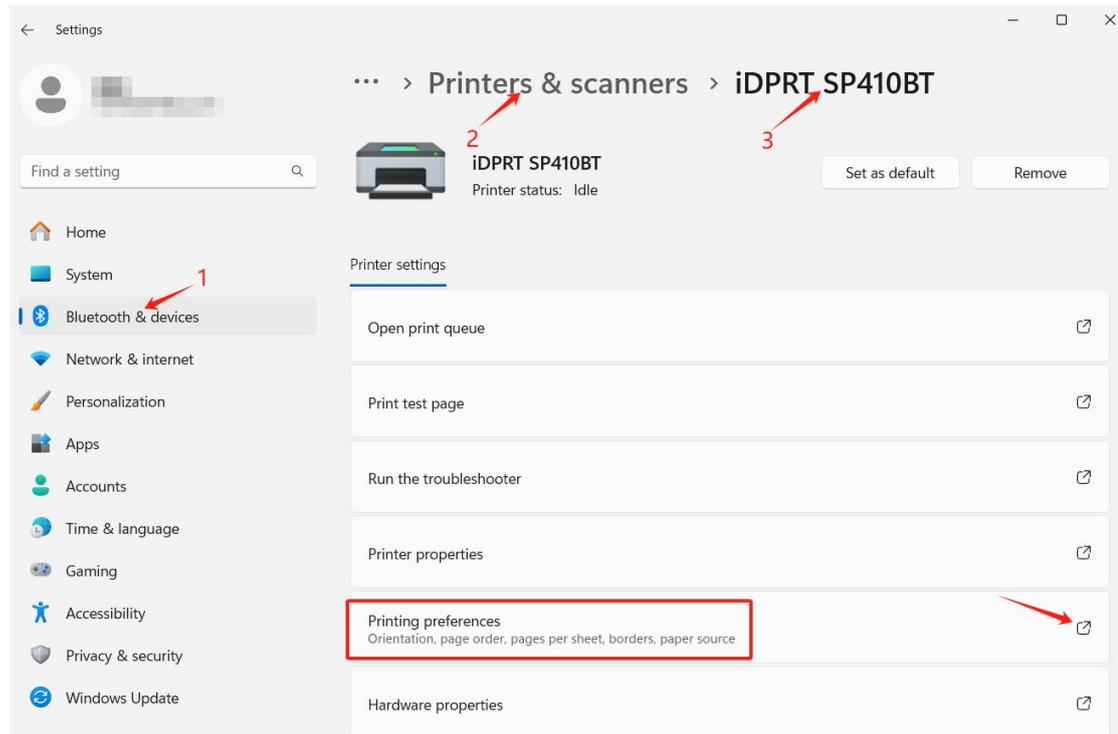

The screenshot shows the 'Hanin Drive Management' application window. The title bar includes 'Hanin Drive Management' and standard window controls. Below the title bar, there are tabs for 'Hanin Drive', 'HereLabel Website', and 'Onlinetool'. The main interface is divided into a left sidebar and a main content area. The sidebar contains menu items: 'Driver Management', 'Driver Installation', 'Print diagnostic', 'After-sales Service', 'Feedback', 'HereLabel', and 'About'. The main content area has two tabs: 'Bluetooth Driver' and 'USB Driver'. Under the 'USB Driver' tab, there is a section titled 'USB Printing Name'. A table lists several printing names, each with a 'Print Test page' button and a 'View print' button. A red box highlights the first entry, 'IDPRT SP410BT', and a red arrow points to its 'Print Test page' button.

Printing Name	Print Test page	View print
IDPRT SP410BT	Print Test page	View print
[REDACTED]	Print Test page	View print
OneNote (Desktop)	Print Test page	View print
Microsoft XPS Document Writer	Print Test page	View print
Microsoft Print to PDF	Print Test page	View print
KONICAMINOLTA 350/250/200 VXL	Print Test page	View print
Fax	Print Test page	View print

## 2. Setting the Printing Preference-settinging

### “ Paper Size”

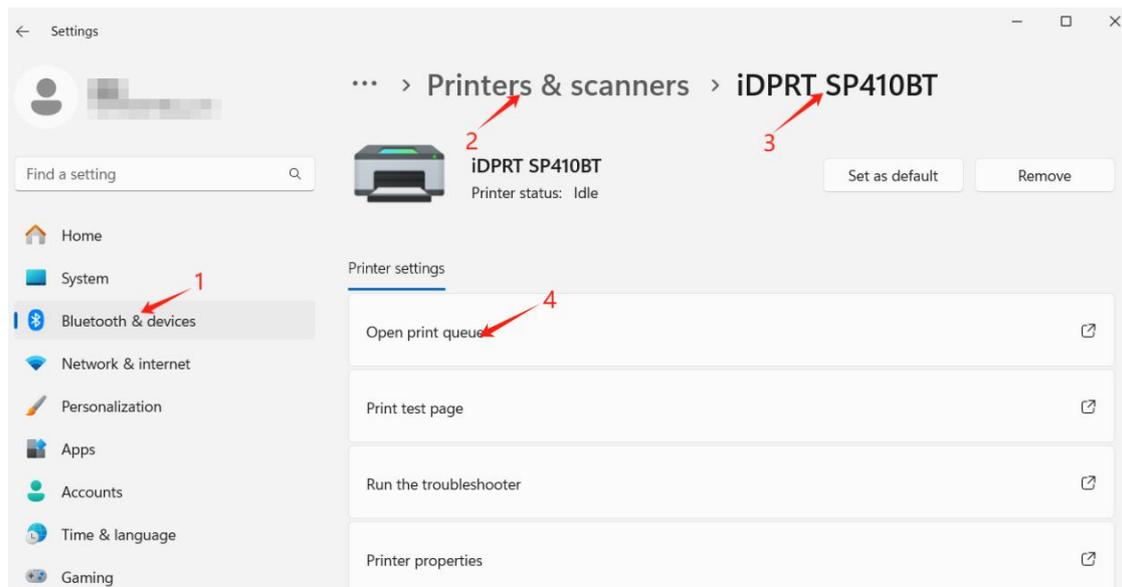

Go to “Bluetooth & device” - “Printers & scanners” - “iDPRT SP410BT” - “Printing preference”

### 3. FQA

(1) -How to identify printing errors??

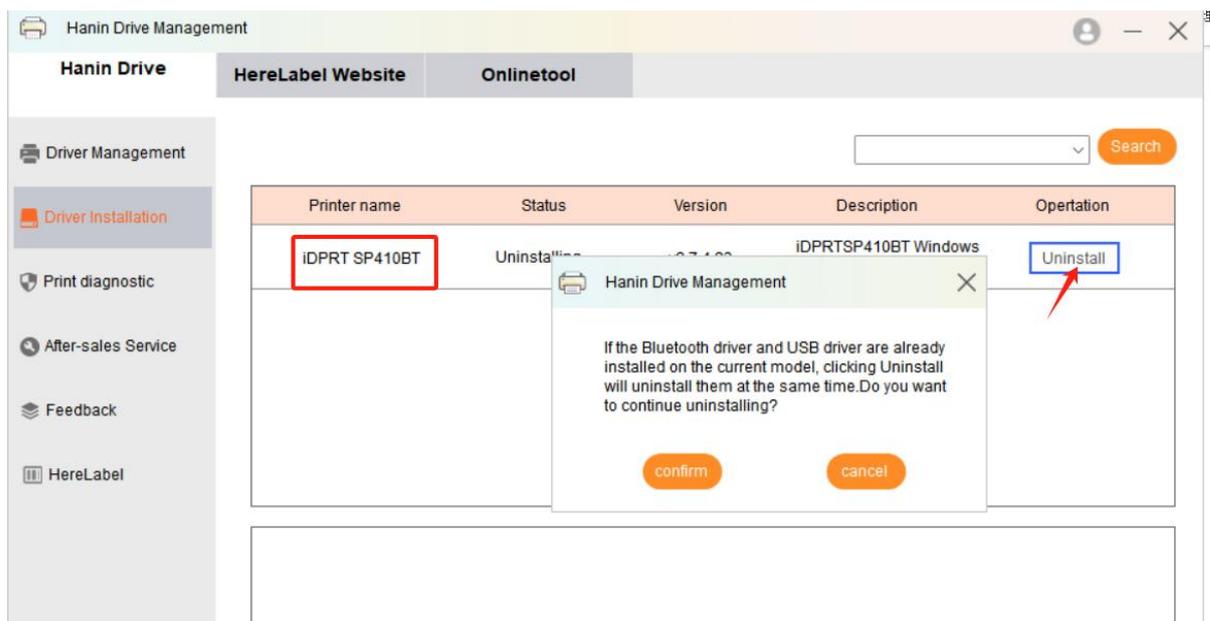

-whether the print is successful is determined by the status of the print queue.

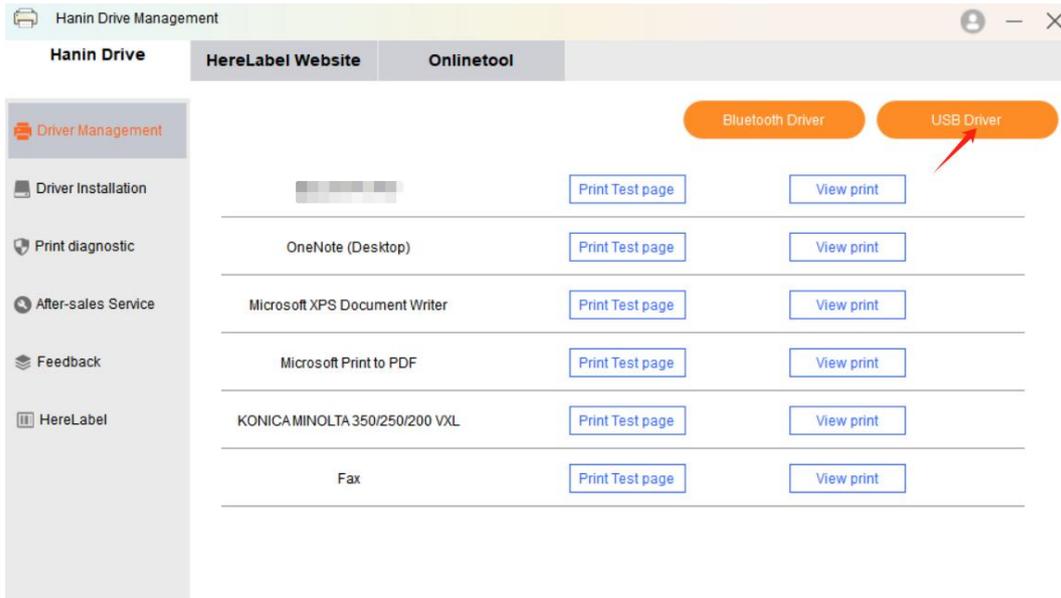

**(2) -After completing all settings, when I printing, the print queue shows that the printing error?**

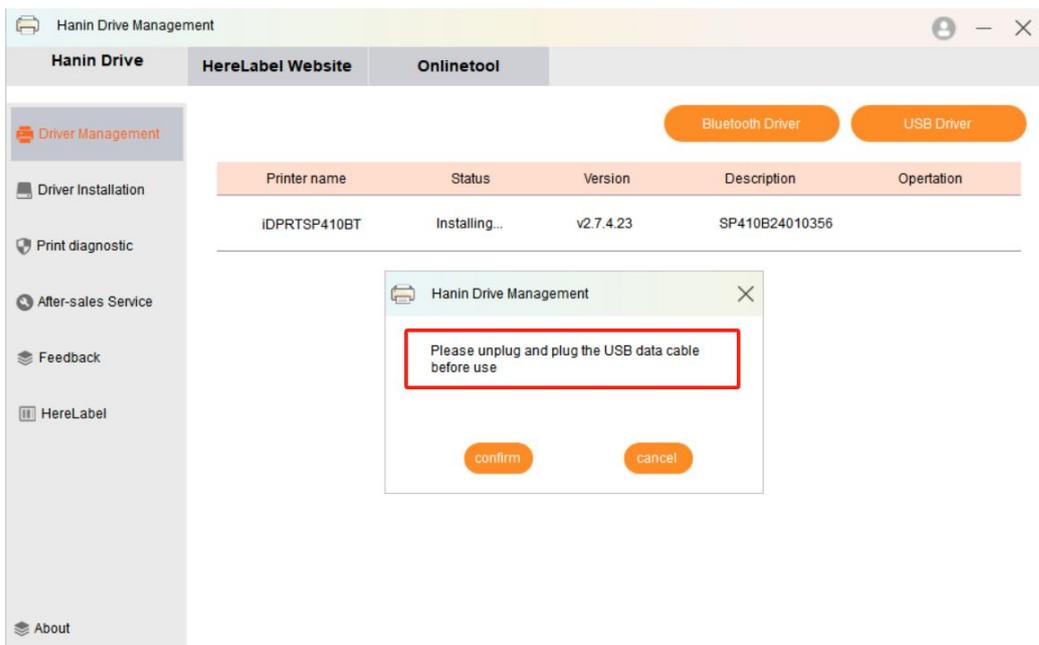

**Step1-** “Error” means printing failed. Please cancel the error printing for all printers. Then, unplug and replug the USB cable to allow the system to re-match the USB port. Next, select the correct printer name and try printing again.

**Step2-** If it still fails, please uninstall the USB driver and then install again ( **NOTE:** If the SP410BT Bluetooth driver was previously installed, it will also be uninstalled at this time)

At the same time, in order to match the computer with the correct USB port, **please unplug and plug in the USB cable as prompted.**

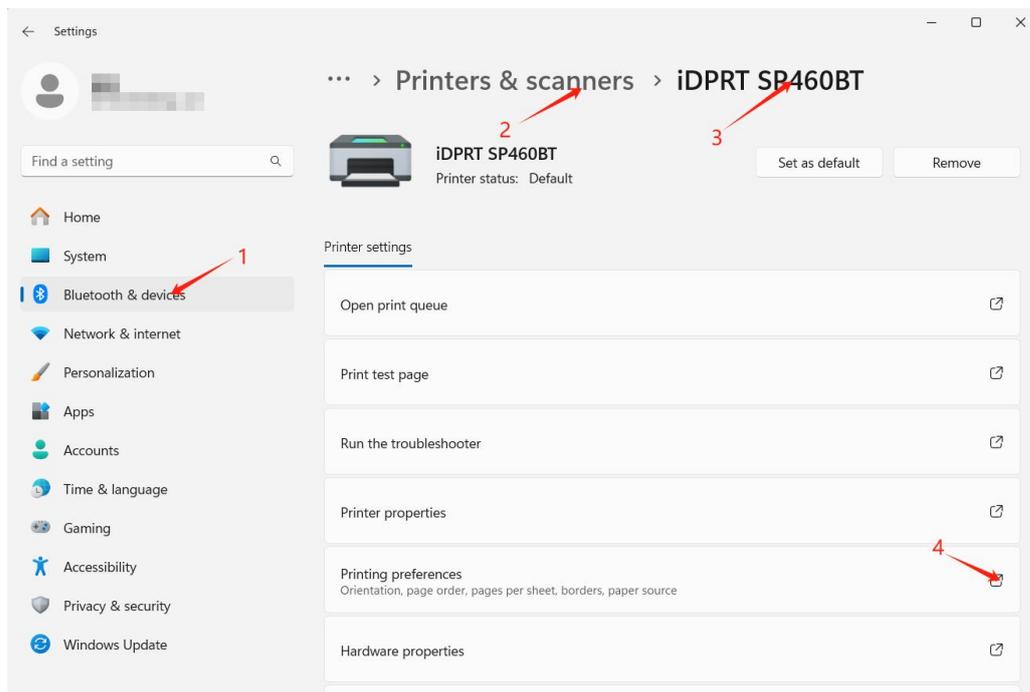

### (3) -What should I do if it prints incorrectly?

-Please follow the steps below:

**Step1-** The most likely reason is that label is not 4x6 inch format, Please back to where you download the labels (eBay, Shopify, Etsy etc.), change format from 8.5x11 inch to 4x6 inch, then download and print again.

**Step2-** If you switch the label, please **recalibrate the printer** when switching label paper and **set the right paper size on computer** before printing.

**Method of set the right paper size:** Go to “Bluetooth & device” - “Printers & scanners” - “iDPRT SP460BT” - “Printing preference”

**Method of recalibrating the printer:** Load at least 5 consecutive sheets of labels into the printer. Press and hold the feed button until the light flashes 2 times, then release the button. When the printer prints several blank labels and intelligently returns the labels, the calibration is complete.

**(4) -Why did the printer automatically print a label when it was not the first time printing?**

-This is because your computer has used this printer before and some of the print files were not printed due to insufficient thermal paper or printer power off. Therefore, if you turn on the printer and it prints automatically, it means that the content has not been printed yet. If you don't want to continue printing, you can cancel it in the print queue.
